

LRT

Meet your dry machining requirements with minimal quantities of lubricant.

Automatic Lubrication System

LRT - DRY MACHINING LUBRICANT

GB

LRT, for dry machining minimal lubrication

LRT is an advanced non- polluting, non- toxic lubricant. It does not blot, produce smoke or cause skin irritation. It is produced using completely innocuous substances yet providing excellent lubrication properties.

Excellent anti-friction and EP proprieties that limit the tool and work area overheating, they can help obtain significantly improved tool life and better surface finishes.

LRT lubricants can be used in machining operations (turning, milling, reaming, drilling, tapping and thread formation, de-burring, cutting, cut saw, cold drawing) and also in deformation processes (rolling, pressing, funneling) of ferrous metals and light alloys.

KEY CHARACTERISTICS:

- Cooling Properties
- Excellent lubricating qualities and anti-welding
- High Quality Surface Finish.
- Increased tool life and reduction in tool sharpening tool requirements and costs.
- Applications can benefit from performance that betters lubricant-water lubrication.

KEY ADVANTAGES:

- **Low Lubricant Consumption.**
- **Environmental benefits.** The air-oil system does not produce oil mist.
- **Clean and 'dry' machined parts.**
- **Easy 'dry' swarf recycling. No oily residues**
- **Significant costreduction**

PRODUCT FEATURES:

Suitable for ferrous and not ferrous metals application

Viscosity cSt at 40° C:	24
Flammability point °C (coc):	> 220
Specific weight Kg/. l at 15° C:	0,900
Solubility:	not soluble in water

CODE	Dimension tanks
3226661	1lt
3225462	20lt
