FLOW MASTER

Automatic Lubrication Systems

GB
USA

FLOW MASTER is a flow volumetric device which allows the constant monitoring of the lubrication delivering.

As the measurements are volumetric, they don't depend on temperature or viscosity but they assure an accurate control without the need of any set up or compensation.

Liquid flowing through the meter module moves a "satellite" which describes fixed orbits. Every orbit is surveyed by an inductive sensor which transmits a signal to a control device. The operator may read the liquid delivering in litres per minute or the revolutions number per minute directly from the FACT 2000 device-display or from a PC monitor.

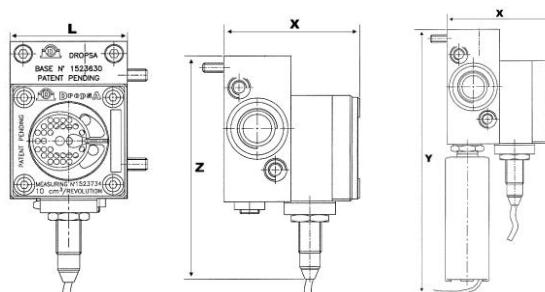

Base and meter module	
Maximum fluid viscosity	1000 cSt (4628 SUS) at operative temperature.
Operative temperature	from -20°C to +60°C (-4 F° to 140 F°)
Minimum pressure	6 bar (88,2 psi) in continuous working
Maximum pressure	20 bar (294 psi) in intermittent working (1 hour maximum working time)
Thread of the base	inlet G"1/2 BSP – outlet G" 3/8 BSP
Gasket	O' Ring in Viton
Bases and modules	Stainless steel AISI 316 or aluminum
Cover	Transparent polyamide
Maximum distance between flow meter and electronic control device	15 meters (5905,5 in.). The use of a shielded cable is recommended.

Flowrate server motor	
Power supply	12 V CC
Reduction ratio	392:1 – Maximum torque: 3 Kg. cm (6,6 lb in.)
Revolutions per minute without load	6 rpm
Revolutions per minute with maximum torque	5 rpm
Absorbed current without load	15 mA
Absorbed current with maximum torque	30 mA
Rotation direction	reversible
